

FEATURES

SLIDE-IN EXCHANGEABLE TOOLS:

A slot where slide-in tools can be easily exchanged allows for a wide variety of jobs to be performed. A male and female crease bar and a perforating bar are available. All tools are made out of steel and will last as long as the main body of the unit.

Crease bar and Perf bar

Linear tools

Easy detached shaft

OPTIONAL LINEAR TOOLS(OPTIONAL):

In order to maximize the value added through finishing the 8336B can be equipped with multiple types of linear tools. This allows the system to perform bi-directional perforating or to do trimming on both edges. For label jobs kiss cutting is possible.

OTHER FEATURES:

- Easy operation
- Auto compensation for varying paper thicknesses
- Crease depth and skew adjustment
- Top suction feed (335B/335B sniper)

Top suction feed (335B/335B sniper)

Slide-in tools

SNIPER TECHNOLOGY:

The patented Sniper technology saves set-up time by up to 80% by setting-up the crease and perforating positions on the fly. All manual time consuming programming is eliminated.

SNIPER PROGRESSIVE TECHNOLOGY:

A patented progressive crease function allows users to make a layflat book simply and quickly. The system instructs the creasing die to crease in slightly different positions on each sheet to create a "V" shape once all the sheets are batched together. See diagram on next page. This allows the book to layflat or it can then be folded by a saddle stitcher to create a squareback booklet.

EASY DETACHED SHAFT:

Each of the many linear tools that are available has its own anvil that is fit onto a lower shaft. Patented technology allows this shaft to be quickly and easily removed.

FUNCTIONS

APPLICATIONS

CREASE OR PERFORATE: With easy programming and operation users can easily perform creasing jobs such as book covers and layflat books. Up to 32 creases per sheet are possible. When equipped with the optional perforating bar the system can produce products like coupons and tickets. Sheets that do not require folding are automatically routed to bypass the folder and go directly to the output tray.

LINEAR TOOLS(OPTIONAL): In order to maximize the value added through finishing the 8336B can be equipped with multiple types of linear tools. This allows the system to perform bi-directional perforating or to do trimming on both edges. For label jobs kiss cutting is possible.

PROGRESSIVE TECHNOLOGY: A patented progressive crease function allows users to make a layflat book simply and quickly. The system instructs the creasing die to crease in slightly different positions on each sheet to create a "V" shape once all the sheets are batched together. See diagram on next page. This allows the book to layflat or it can then be folded by a saddle stitcher to create a squareback booklet.

SPECIFICATIONS

Infeed size:	140*160mm-330*900mm(335B/335B sniper) 50*90-330*900mm (335/335 Sniper)
Paper weight:	150-350gsm
Paper type:	Chrome, laminated, UV coated etc.
Crease width:	1.0mm standard, 0.6 1.2 1.4mm options
Crease/Perf in one pass:	Up to 32 times in one pass
Accuracy:	+/-0.2mm
Feeding type:	Air Suction Feeding(335B/335B sniper) Manual Feeding (335/335 Sniper/335B/335B sniper)
Feeding capacity:	90mm (335B/335B sniper)
Control Panel:	Keyboard and LCD screen
Progressive:	Yes
Book cover mode:	Yes
Sniper function:	For 335 sniper /335B sniper
Options:	Cross perforator bar (6/8/12/24/52 TPI) Slitter, linear kiss cutter, Scorer Linear perforate blade (8/12/24/48 TPI) Stand
Power:	Either 220V Or 110V ,50Hz/60Hz
